GC050LX
GP050LX

5,000 lbs.

We put a lot of big ideas into a smaller truck.

When you need a dependable, productive lift truck designed for your application, look no further than the Yale® GC050LX and GP050LX lift trucks. These streamlined, easy-to-operate trucks feature excellent fuel economy and carefully considered ergonomics designed for the comfort of your operator, all at a budget-friendly price point.

The GC/GP050LX forklift is no lightweight. It incorporates all the best things about our heavy duty Yale Veracitor® trucks—smart design, solid construction, durability and reliable performance, to name a few.

This is all the truck you need.

Government & Services

Universities & Colleges, Maintenance, Groundskeeping, Hotels & Motels, Amusement Parks, Convention Centers

Agriculture

Fruit & Vegetable Farming, Nurseries, Farmer's Markets

A lift truck that works smarter and harder.

Efficiency is the name of the game, and these trucks deliver—starting with fuel economy. The GC/GP050LX series is driven by a PSI 2.4L industrial engine carefully selected to deliver strong performance while using less fuel.

The GC/GP050LX series is engineered for productivity and agility. Every GC/GP050LX truck is built with an electronically controlled powershift transmission for smooth direction changes. We've designed these trucks to be compact and easy to maneuver, so they are as agile in tight spaces as in open ones. Responsive, operator-selectable electronically controlled inching adjustments give the operator better control over load positioning. An optional integral sidsifter allows the load to be optimally positioned.

A slimmed down truck with ownership costs to match.

The GC/GP050LX series is designed to be a great value, getting the job done without breaking the bank. This ultra-efficient, ultra-durable lift truck starts at a budget-friendly price point, and it continues to earn its keep with low overall operating costs and excellent fuel efficiency.

The GC/GP050LX lift trucks strike the perfect balance between productivity and value. They get the job done while using less fuel than the leading competitors.

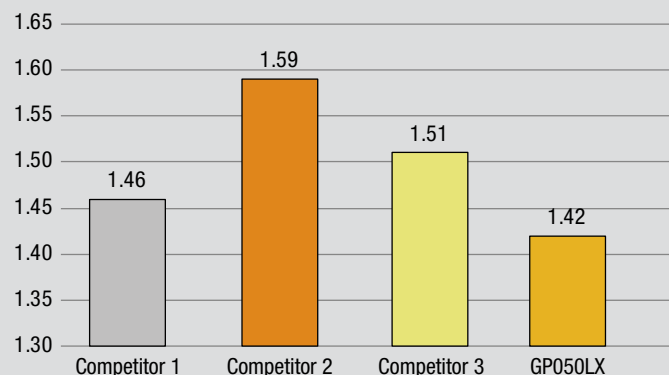

Yale® Flex Performance Technology™

The innovative Yale® Flex Performance Technology™ offers the flexibility to maximize fuel economy or productivity to match application needs. The GC/GP050LX series features two modes that allow customers to tailor productivity levels to the demands of their application. This feature provides operators the ability to achieve a balance of enhanced performance and superior fuel economy, or to maximize productivity during peak business periods when moving more loads is integral to the success of your operation.

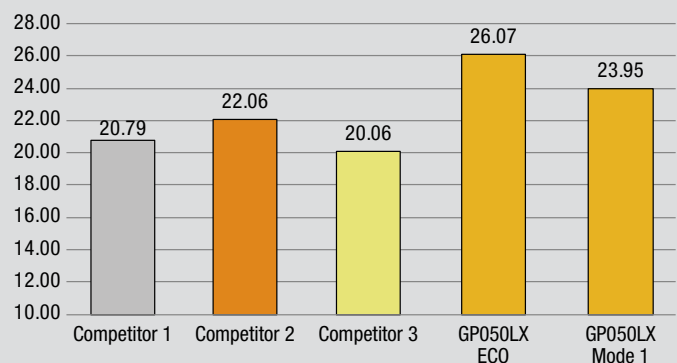

In competitive testing, the Yale® GP050LX used less fuel per hour during the duty cycle than the competitors. Using less fuel per hour increases the productivity of your workforce and reduces your overall cost of ownership.

** Tests conducted using standard engine configuration.*

Gallons of Fuel Consumed per Hour

Loads Moved per Gallon of Fuel

Maintaining this smart truck is a total no-brainer

This GC/GP050LX series is designed to be user-friendly in every respect. That includes maintenance. The easy open hood combined with a removable floor plate—no tools required—give you cowl-to-counterweight maintenance access. A sophisticated but uncomplicated electrical system enables our technicians to keep your truck operating at peak performance.

And your service is backed by North America's best dealer network, so you'll feel confident that your lift truck is getting the most thorough and reliable service anywhere.

○ This just might be the most reliable employee you've ever had!

Forget complicated one-size-fits-all trucks. We've optimized the components of the GC/GP050LX trucks to give you heavy duty construction where you need it, and simplicity everywhere else. Every system and component of the GC/GP050LX series is specifically designed to maximize uptime, from the top of the mast down to the tires.

□ **Comfort shouldn't be a luxury**

The GC/GP050LX trucks don't skimp on operator comfort.

No one works well when they're cramped, sore, contorted into unnatural positions, or otherwise uncomfortable. That's why we put as much effort into the design of the operator compartment as we did into engineering the rest of the GC/GP050LX series. Our human-friendly design makes operator comfort and adjustability a top priority, from extra foot space to the infinitely adjustable tilting steer column that accommodates drivers of all shapes and sizes. Excellent visibility in forward and reverse directions lets drivers see all around the truck without having to twist and turn. We've even made the seatbelts comfortable. The standard non-cinch seatbelt stays loose during normal driving conditions and automatically locks if the situation requires it. An optional rear drive handle with horn button makes reverse operation easier.

Supporting customers **With world-class parts and service**

Our Guaranteed Availability Program (G.A.P.) ensures that parts that are normally required in the first 2 years of operation will be available from your Yale® parts dealer within 24 hours or they are free. With four Parts Distribution Centers strategically located around the world, we provide a full range of original equipment and aftermarket parts that maintain our customers' uptime.*

We also take that commitment into the field with Yale's ProTech® Certification training program, available to our dealers' technicians. The ProTech® technical training program provides both systems level as well as product specific education to ensure lift trucks are repaired right the first time.

* Consult your local dealer for G.A.P. program rules.
